PROFILE

I have always had an interest in technology development which consequently has led me to pursue a career as a Full-Stack Developer.

I am keen to explore how websites work and the intricate details of creating interactive and immersive web pages.

- HTML5
- CSS3
- jQuery
- ReactJS
- ExpressJS
- MySQL
- NoSQL
- Test Driven Development
- AWS - S3
- Handlebars
- Github / Gitlab / Git
- Agile Methodology
- MongoDB

PROJECTS

SOLO TRAVELLER APP

<https://github.com/riz1ash786/solo-traveller>

- Solo Traveller is a travelling application that has been designed to offer a single place for users who are interested in solo-travelling to browse various trips offered by travel companies.
- Once registered users are able to socialise with other solo-travellers prior to travelling by uploading their profile picture and creating new posts and comments.
- Travel companies have their own unique sign-up and login page. Each company has their own individual company account with an admin feature where they are able to post new trips, edit existing trips and upload unique images.

CRYPTO-GUIDE APP

<https://github.com/riz1ash786/CryptocurrencyFinder>

- CryptoGuide is an application that has been designed to offer users a unique experience in which to research, learn and explore the cryptocurrency market.
- The application utilises two server-side API's, a crypto currency search engine as well as a specific-to-search related daily news section offering.
- The application has been designed to include a 'Top 15' table as well as 'CryptoBasics' page, essentially answering FAQs related to the crypto market.
- Finally, the 'Exchanges' page offers user access away from the application to view some of the most popular crypto exchanges being utilised by investors today.

E-COMMERCE BACKEND APP

<https://github.com/riz1ash786/e-commerce-back-end>

- I was tasked to build the back end for an e-commerce site, the application required configuring an ExpressJS API to use Sequelize to interact with a MySQL database.
- This application required the need to execute association methods on Sequelize models to create relationships as well as setting up foreign key relationships.
- The application performs RESTful CRUD operations using Sequelize and also syncs to the MySQL database on server start.

EDUCATION

University of Birmingham (2021-2022)
